

RestorFlora™

Saccharomyces boulardii, B. Clausii, & B. Subtilis, HU58™

RestorFlora™ is the first probiotic bacteriotherapy product that has combined three of the world's most well studied and widely used probiotic strains –*Saccharomyces Boulardii*, *Bacillus Subtilis* HU58™ and *Bacillus Clausii*. This combination of clinically studied, friendly probiotic yeast and probiotic bacteria offers comprehensive digestive flora support with an advanced, dual-action approach to maintaining a healthy intestinal environment.

Saccharomyces boulardii is well studied and extensively used for its ability to curb digestive issues associated with antibiotic use. However, a product containing only *S. boulardii* has limitations with regards to other important probiotic functions. RestorFlora™ represents a significant advancement that overcomes these limitations with the addition of *Bacillus Subtilis* HU58™ and *Bacillus Clausii*, RestorFlora™ provides competitive exclusion of bad and potentially harmful organisms, as well as the ability to colonize in the digestive tract to produce favorable immune responses.

Suggested Use

1 capsule per day with a meal, or as directed by your physician. Capsules can be opened and contents sprinkled on soft foods, water, juice or other non-carbonated beverages for easy consumption.

Benefits of RestorFlora™

- Supports a balanced intestinal flora*
- Promotes intestinal health*
- Supports healthy bowel movement*

Does not contain binders, fillers or flow agents. This product is free of dairy, wheat, gluten, salt, sugar, soy, artificial colors or flavors. No refrigeration necessary.

RestorFlora™

Competitive Exclusion of Bad and Potentially Harmful Organisms

Antibiotic use, daily stresses, poor diets, chemicals, age and fluoride exposure, etc. makes our digestive system susceptible to pathogenic bacteria and yeast overgrowth.

RestorFlora™ is formulated with *Bacillus Subtilis* HU58™ and *Bacillus Clausii*, both species have been shown to be potent competitive exclusions probiotics and widely used as a protective probiotic for nearly 60 years in pharmaceutical industry in Europe and in Asia.

Ability to colonize the digestive tract and produce favorable immune changes

Both bacillus species found in RestorFlora™ have been demonstrated to favor an anti-inflammatory reaction in the digestive tract. Inflammation in the digestive system is at the root of many disorders both systemically and intestinal.

Improves energy and helps to maintain blood glucose levels

Cellular energy output is largely controlled by digestive health. Studies have demonstrated that the short-chain fatty acids produced by RestorFlora® help maintain a healthy fasting blood glucose, fasting insulin, and insulin tolerance, which improves sugar metabolism, so you get a better balance of energy from fat and sugars.

*Aids in digestion • Helps control harmful bacterial overgrowth • Detoxifies the intestinal tract • Reduces inflammation
Supports immune modulation in the digestive tract • Improves regularity*
